Security Awareness Program

Reducing Human Risk in Cybersecurity

Presented By

Roza Calloway

Date

April 2026

Program Overview

This program is designed to reduce human-related cybersecurity risks by improving employee awareness and promoting secure behaviours. Human error is a leading cause of security incidents, underscoring the critical role of employee education in organizational security.

Objectives

- Reduce phishing-related incidents.
- Improve password security practices.
- Increase awareness of common cyber threats.
- Strengthen incident reporting behaviour.

Training Plan

Phishing Awareness

- Identify phishing emails and social engineering attacks.
- Method: Training + simulated phishing
- Frequency: Quarterly

Password Security

- Strong passwords + MFA usage
- Method: Online training
- Frequency: Annually

Malware & Threat Awareness

- Recognizing malicious links, downloads
- Method: Online modules
- Frequency: Annually

Device & Data Security

- Safe handling of devices and sensitive data
- Method: Training modules
- Frequency: Annually

Incident Reporting

- How to report suspicious activity
- Method: Training + reminders
- Frequency: Annually

Training Structure

Topic	Description	Method	Frequency
Phishing Awareness	Identify phishing emails and social engineering attacks	Online training + simulated phishing exercises	Quarterly
Password Security	Create strong passwords and use multi-factor authentication (MFA)	Online training modules	Annually
Malware & Threat Awareness	Recognize malicious links, attachments, and downloads	Online training modules	Annually
Device & Data Security	Safely handle devices and protect sensitive data	Online training modules	Annually
Incident Reporting	dentify and report suspicious activity and security incidents	Training sessions + periodic reminders	Annually

Learning Approaches

E-Learning

Self-paced online training modules delivered through a learning management system (LMS)

Phishing Simulations

Simulated phishing campaigns are used to test employee awareness and reinforce training.

Gamification

Interactive learning activities that encourage engagement and reinforce secure behaviours

Blended Learning

Combination of online training, simulations, and ongoing awareness communications

Metrics

Metrics are used to measure program effectiveness and identify areas for improvement.

Phishing Simulation Click Rate

Measures employee susceptibility to phishing attacks and social engineering attempts

Reported Phishing Emails

Tracks how often employees identify and report suspicious emails

Training Completion Rate

Measures employee participation and completion of required security training

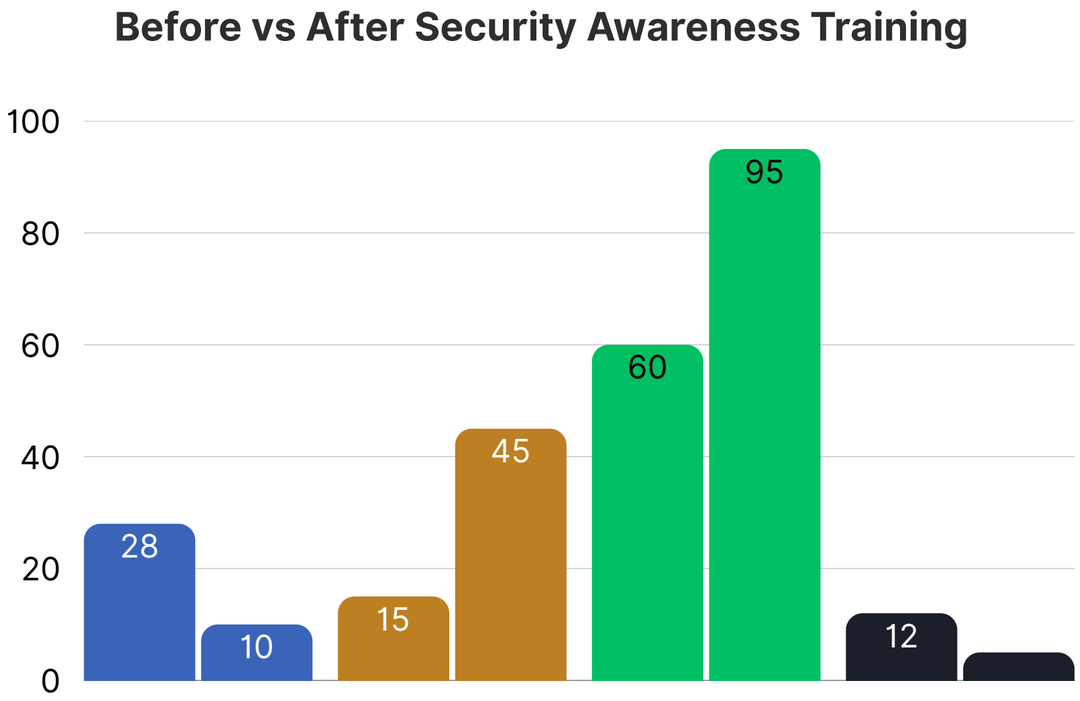
Number of Security Incidents

Tracks the frequency of security incidents caused by human-related risks

Program Effectiveness

This program improves organizational security by reducing human-related risks and strengthening employee awareness. Measurable improvements are tracked through key performance indicators, including phishing simulation results, training completion rates, and incident reporting.

- Phishing Click Rate
- Reported Phishing Emails
- Security Incidents
- Training Completion Rate



Results demonstrate reduced phishing susceptibility and improved security awareness across the organization.

Key Outcomes

The security awareness program delivers measurable improvements in employee behaviour and reduces human-related cybersecurity risks. By reinforcing secure practices and increasing awareness, the program strengthens the overall security posture.

Risk Reduction

Decreased phishing susceptibility and reduced likelihood of human-related security incidents

Security Awareness

Enhanced employee understanding of cybersecurity risks and best practices

Improved Reporting

Increased employee reporting of suspicious emails and potential security threats

Compliance Support

Supports organizational compliance efforts through structured training and policy alignment

Summary

This security awareness program supports the organization’s risk management strategy by addressing human-related vulnerabilities. Through continuous training, measurable outcomes, and reinforcement of secure behaviours, the program strengthens overall security posture and reduces organizational risk.
